

MDATE(c)

MDATE(c)

NAME

mdate — modify date of file

SYNOPSIS

mdate = 11.

ARGUMENTS(input)

- capability associated with working directory of sender process
- 0 - name byte offset into message
- 1,2 - date (32 bits)
- 3 - pathname of file

VALUES(returned)

none

DESCRIPTION

The modified time of the file whose name is specified is set to the 32-bit time passed in the message. Only the super-user or owner of the file may set the modified time of the file.

SEE ALSO

time(II), mdate(II).

DIAGNOSTICS

An error status byte is returned if the user is neither the owner nor the super-user or if the file cannot be found.
